SUMMARY

Product Designer with 6 years of experience across B2B SaaS and Fintech. At Knit API, I am the sole designer working on developer tools and AI agents. I lead design end-to-end from customer research to shipping and measuring impact, using AI to accelerate research, exploration, and prototyping and quicker handoffs.

WORK EXPERIENCE

Knit API Pvt. Ltd. **Bengaluru (Remote)**

Product Designer (UI/UX Designer) *Apr 2024 - Present*

- Led product design for Knit's flagship product - Unified API webapp, taking it from docs to live product in just over a month. Worked closely with the founders and engineering team to design the core user flows for launch and then refined the experience using customer insights, support feedback and analytics data
- Designed Knit's white-labelled auth UI embedded across 30+ SaaS products, giving end users control over data sharing permissions and custom field mapping
- Redesigned data syncing flow in Figma, helping users diagnose failures without contacting support, increasing job-to-run exploration from 29% to 40%, enabling users to inspect failing records, reducing reliance on Knit's support team
- Redesigned logs so users can see what failed and why without leaving the page. One searchable table with plain-language errors in place removed the back-and-forth that made up a quarter of all the page loads, reducing them to about 30%
- Designed a human-in-the-loop flow for creating custom connectors, where Knit's AI agent builds connectors for unsupported apps in minutes instead of a week, with users reviewing endpoints and field mappings before publishing.
- Unified Knit's Unified API, MCP Hub, and AI Workflow Builder under one design system and shared dashboard. Redesigned MCP onboarding for team adoption with bulk imports, SSO and tool permissions
- Designed an alert management system in Figma enabling users to catch failures early through configurable alert thresholds, alert type and organization-level notification settings (pending development)

SuperBeings **Bengaluru (Remote)**

Product Designer (UI/UX Designer) *Aug 2022 - Apr 2024*

- Redesigned the performance review process, making it easier for managers to set up review cycles, collect feedback, and complete employee evaluations
- Simplified employee engagement surveys and goal-settings (OKRs), making them easier to create, manage and track

KFin Technologies Pvt. Ltd. **Hyderabad, India**

Project Lead (UI/UX) *Jun 2020 - Aug 2022*

- Co-designed Digix as a part of three-person design team, shaping the end-to-end UI for a self-service platform that replaced manual compliance with no-code scheduling and generation of statutory and daily reports

EDUCATION

BITS Pilani, Hyderabad Campus **Hyderabad, India**

B.E. (Hons.) Electrical and Electronics Engineering and M.Sc. (Hons.) Chemistry *Graduation Date: Sep 2020*

SKILLS & INTERSETS

Design: Figma, Product Strategy, Information Architecture, UI Design, Interaction Design, Accessibility, Design Systems, Prototyping, Usability Testing, Behavioral Psychology

Specialities: AI agent and human-in-the-loop UX, behavioral design, complex B2B and fintech workflows

Research & Data: Customer Interviews, Support Ticket Analysis, Funnel Analysis, Session Recordings, Post-launch Analytics (Heap, Microsoft Clarity)

AI in my workflow: Claude, Claude Code, Figma MCP and Google Stitch for research synthesis, screen audit, wireframe exploration, design-to-code handoff and build QA
